PUBLICATION OF THE PATENT OFFICE

INTRODUCTION

In view of the recent amendment made in the Patents Act, 1970 by the Patents (Amendment) Act, 2005 effective from 01st January 2005, the Official Journal of The Patent Office is required to be published under the Statute. This Journal is being published on weekly basis on every Friday covering the various proceedings on Patents as required according to the provision of Section 145 of the Patents Act 1970. All the enquiries on this Official Journal and other information as required by the public should be addressed to the Controller General of Patents, Designs & Trade Marks. Suggestions and comments are requested from all quarters so that the content can be enriched.

(57) Abstract :
Title: ORION: Bidirectional Consumption-Driven Retail Inventory and Demand Intelligence System The invention relates to a bidirectional retail intelligence system that links consumer consumption behaviour with inventory control through a closed operational feedback loop. User actions such as capturing images of items or recording usage events are transformed into structured consumption signals that update personal and store inventory states in real time. Operational data and behavioural logs are persistently stored and converted into analytical features for embedded predictive and descriptive models, including demand forecasting, depletion prediction, personalised recommendation, behavioural segmentation and anomaly detection. The resulting intelligence is delivered through separate consumer and retailer channels to generate role specific alerts, guidance and procurement directives. These outputs actively influence subsequent consumption and stocking actions, which in turn produce new data for further analysis. By coupling execution with analytics in a continuous loop, the system enables predictive inventory management, reduces manual data handling and improves demand planning accuracy based on real world usage patterns.
